A Longitudinal Perspective on Masked Morphological Priming in Children

Sascha Schroeder

Jana Hasenäcker

Max Planck Institute for Human Development, Berlin

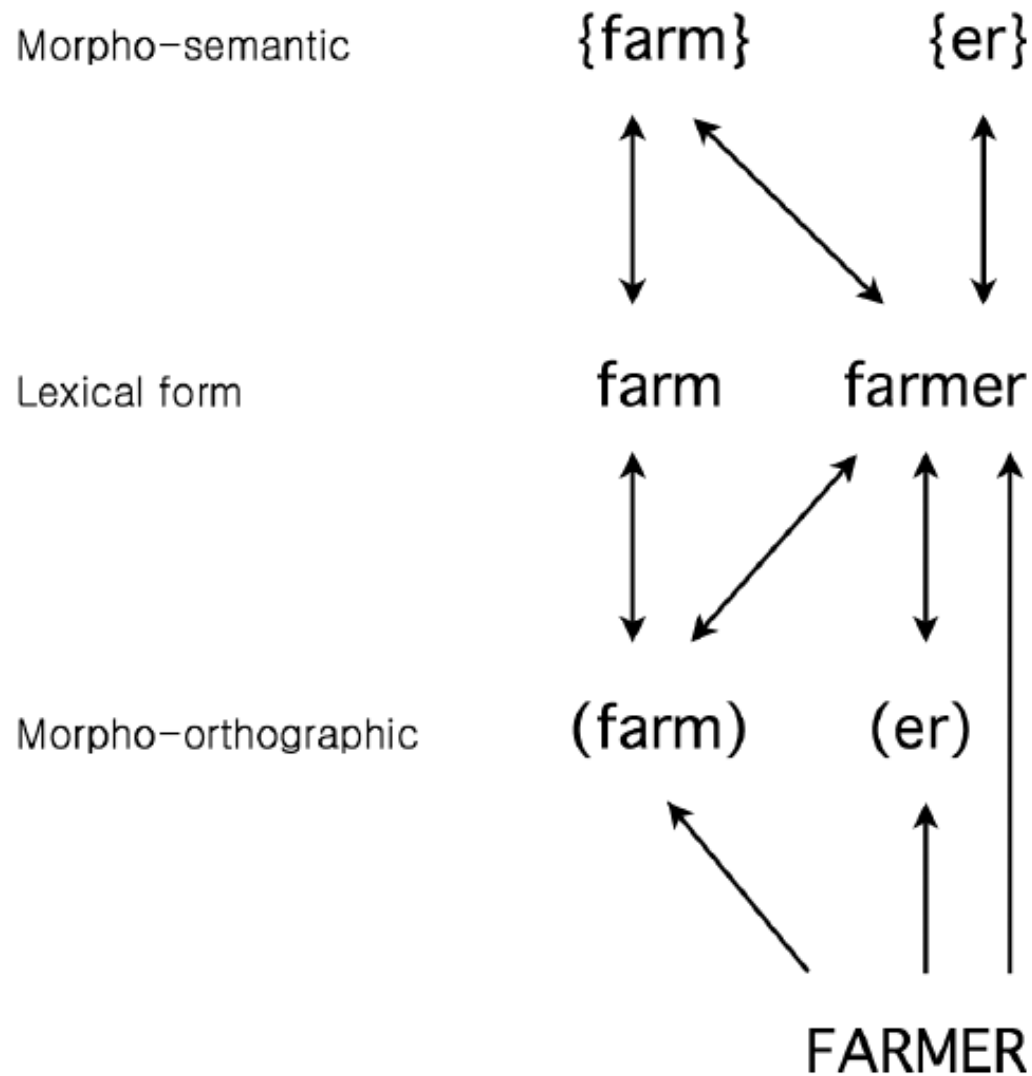

Elisabeth Beyersmann

Macquarie University, Sydney

International Morphological Processing Conference, Trieste

23.6.2017

Theoretical Background

Diependaele et al. (2009)

Theoretical Background

- Inflection:
 - lese, liest, lesen, lest, lesest, leset, las, last, lasen, läse, läsest, läse, läsen, läset, lies...
 - Ⓟ correspond all to English „read“
- Derivation:
 - Prefixes: ablesen, anlesen, auflesen, auslesen...
 - Suffixes: lesbar, Leser, Lesung, leserlich...
 - Ⓟ can be combined freely: Ablesung, Aufleser, Lesbarkeit...
- Composition:
 - Lesebuch, Lesezeit, Lesestoff, Leseraum...
 - Gedankenlesen, Krimilesen, Frustlesen, ...
 - Ⓟ can be created „on the fly“

Theoretical Background

Partnerlesegeschichten

Theoretical Background

- Masked Morphological Priming (e.g., Rastle et al., 2004)
 - **farmer** vs. control: morpho-semantic priming
 - **corner** vs. control: morpho-orthographic priming
 - **cashew** vs. control: orthographic priming
- Findings with adults (e.g., Rastle & Davis, 2008)
 - morpho-semantic \leq morpho-orthographic $<$ orthographic
- Findings with children inconsistent:
 - Quemart et al. (2011): morpho-semantic/orthographic priming
 - Beyersmann et al. (2012): only morpho-semantic priming

Theoretical Background

- Morphological Nonword Priming (Longtin & Meunier, 2005)
 - **farmer** vs. control: morpho-semantic priming
 - **farmation** vs. control: morpho-orthographic priming
 - **farmald** vs. control: orthographic priming
- Findings with adults (e.g., Morris et al., 2011)
 - As in standard paradigm, but also priming in the orthographic condition
- Findings with children (Beyersmann et al., 2015, Hasenäcker et al., 2016)
 - Priming in all conditions, stronger in morpho-semantic condition
 - Not moderated by grade (cross-sectional)
- Interindividual differences (Beyersmann et al., 2014, 2015)
 - Priming in orthographic condition increases with reading skill

Aims

1. Investigate changes in morphological priming during primary school using a longitudinal design.
2. Disentangle grade and reading skill effects.

Methods

- $N = 102$ Participants:
 - Orthographic Processing in Reading Acquisition (OPeRA)
 - here: $N = 90$ (above chance performance/full data at all grades)
 - 50 girls, $M = 6.8$ ($SD = 0.5$) years at T1
- Longitudinal Design:
 - T1: Grade 2 (Nov/Dec 2014)
 - T2: Grade 3 (Nov/Dec 2015)
 - T3: Grade 4 (Nov/Dec 2016)
- Measures:
 - ...
 - Reading Fluency: SLRT II (one minute of reading test)
 - ...

Methods

Reading Fluency

Grade 2: $M=36.8$, $SD=14.5$, Grade 3: $M=64.0$, $SD=21.1$, Grade 4: $M=76.4$, $SD=19.5$

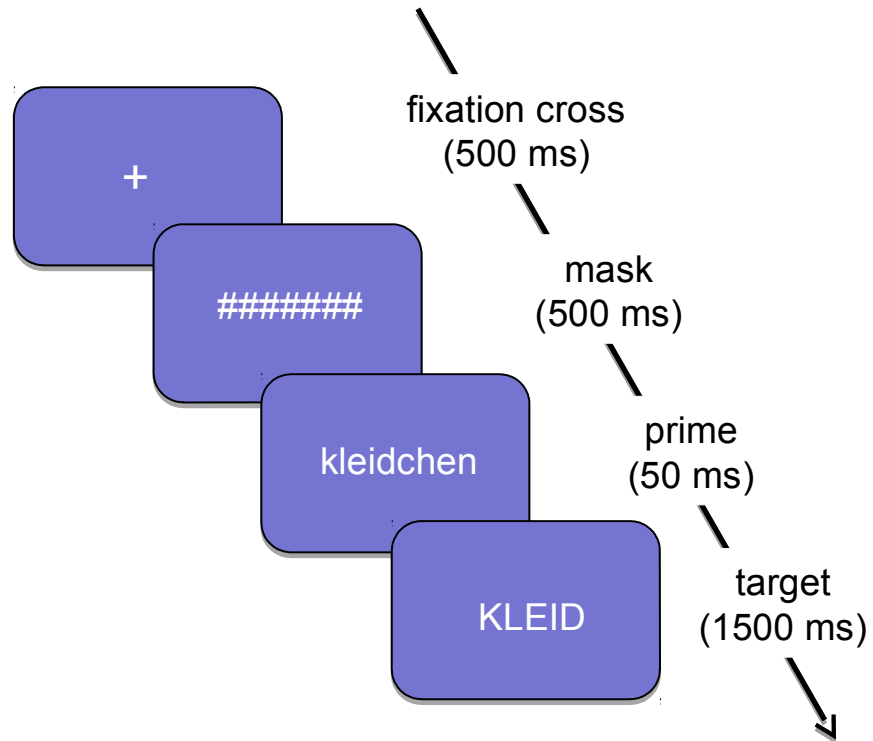

Methods

- Standard masked morphological nonword priming
- $n = 50$ words, $n = 50$ nonwords
- 4 prime conditions:

Condition	real suffixed	pseudo suffixed	non suffixed	control
Word	kleid-chen (farm-er)	kleid-tum (farm-ation)	kleid-ekt (farm-ald)	stern-chen (dream-er)
Nonword	golb-chen (gumb-er)	golb-tum (gumb-ation)	golb-ekt (gumb-ald)	sonk-chen (tolf-er)

- Lexical decision on target (KLEID/GOLB)
- Here: Only word responses (no effects for nonword data)

Summary

- The overall pattern of morphological priming effects in children is similar as in adults.
Beyersmann et al. (2014, 2015), Hasenäcker et al., (2016)
- Morpho-semantic priming is found in all children, even in grade 2 and in poor readers. Beyersmann et al. (2012)
- Morpho-orthographic effects emerge slowly during reading development. Beyersmann et al. (2012)
- Priming in the orthographic condition is only found in good readers. Beyersmann et al. (2014/2015)

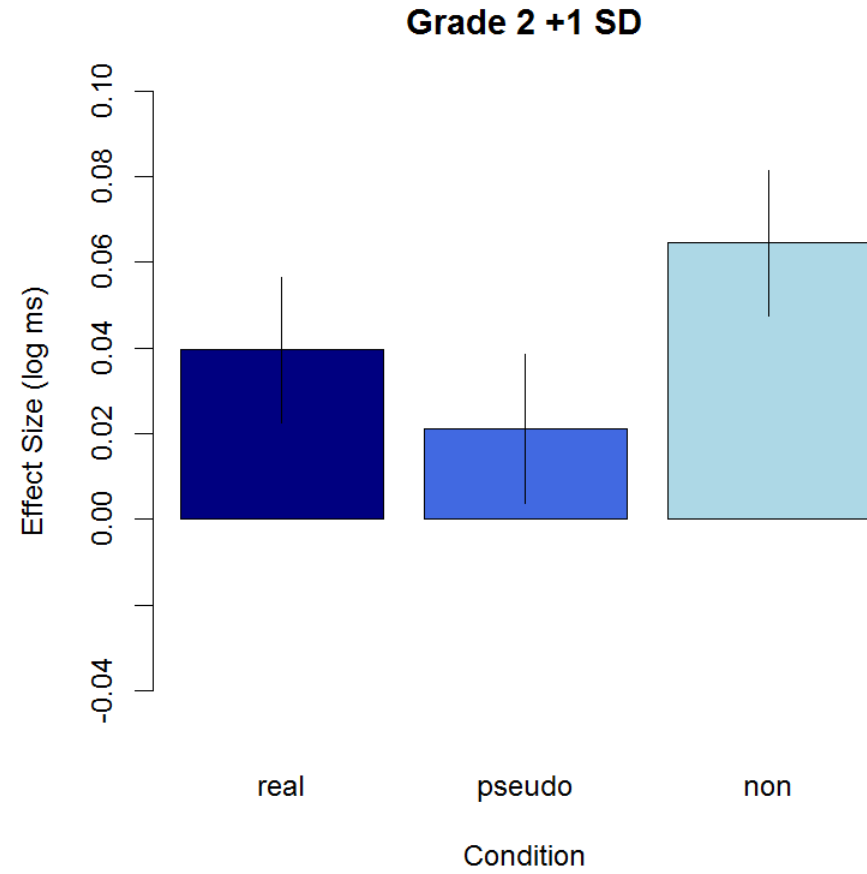

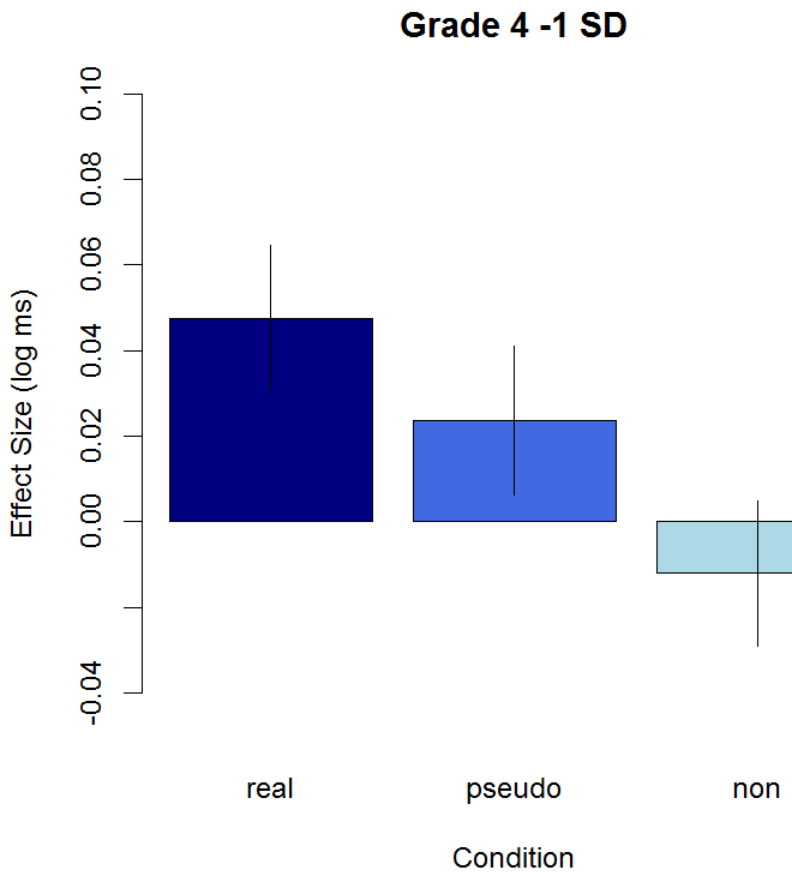

Discussion

- Not one, but two developmental mechanisms!
- 1. Good readers are able to extract embedded stems directly and efficiently. Grainger & Beyersmann (2017)
- 2. Poor readers rely on morphological decomposition
 - For beginning readers, morphological decomposition is only successful if semantics aids the decomposition process.
 - During primary school, morphological representation become more stable and morpho-orthographic decomposition is possible.
- Open issue: What is special about good readers?
