

Old and new perspectives on the study of human memory

Saturday, September 13, 2025 3:30 PM (1h 30m)

Chair(s): Giulia Marselli e Daniele Gatti

Human memory is a complex cognitive function that ranges from basic abilities to high-level processes. In this symposium, we aim to explore the study of human memory from multiple perspectives, bringing together evidence from various subfields. The five talks will cover a wide range of topics, with the specific goal of showcasing the diversity and depth of potential applications in memory research. Specifically, the talks will for address autobiographical memory in relation to sex and age differences, include cross-cultural comparisons, and conclude with investigations into (semantic) false memory formation, tested across different modalities.

Speakers:

- Giulia Marselli
- Gianmarco Convertino
- Mara Stockner
- Francesca Rodio
- Daniele Gatti

If you're submitting a symposium talk, what's the symposium title?

If you're submitting a symposium, or a talk that is part of a symposium, is this a junior symposium?

Yes

Primary authors: MARSELLI, Giulia; GATTI, Daniele (Università di Pavia)

Co-authors: RODIO, Francesca Maria (IUSS - Istituto Universitario di Studi Superiori Pavia); CONVERTINO, Gianmarco (Sapienza, University of Rome); STOCKNER, Mara

Presenters: RODIO, Francesca Maria (IUSS - Istituto Universitario di Studi Superiori Pavia); CONVERTINO, Gianmarco (Sapienza, University of Rome); MARSELLI, Giulia; GATTI, Daniele (Università di Pavia); STOCKNER, Mara

Session Classification: Old and new perspectives on the study of human memory

Track Classification: Memory
