

Experiments: Implications of GW searches in the latest data release of the EPTA

Tuesday, September 5, 2023 4:00 PM (30 minutes)

EPTA has been taking data for 25 years and has now uncovered the first hint of a common signal in the data. I will discuss what are the consequences on this results for the astrophysics of supermassive black hole binary, processes in the early universe and specific models of dark matter.

Presenter: SESANA, Alberto (Universita' di Milano Bicocca)

Session Classification: Parallel Sessions
